Training nach dem Lehrmittel Kopfrechnen 02

Tricks: 6.4, 6.5, R

Beispiele

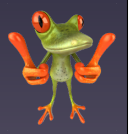

6.4 $280 : 60 = \frac{280}{60} = \frac{140}{30} = \frac{70}{15} = \frac{14}{3} = 4.666\ldots$

Beispiele

$$6.4 \quad 280 : 60 = \frac{280}{60} = \frac{140}{30} = \frac{70}{15} = \frac{14}{3} = 4.666\ldots$$

$$6.5 \quad 63 : 5 = \frac{63}{10} \cdot 2 = 12.6$$

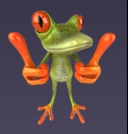

Ready?

01

$$150 : 25 =$$

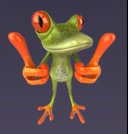

02

$$160 : 5 =$$

03

$$245 : 2 : 5 =$$

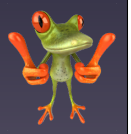

04

$$246 : 15 =$$

05

$$45 \cdot 7 \cdot 2 =$$

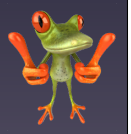

06

$$245 - 34 + 55 - 66 =$$

07

$$2200 : 44 =$$

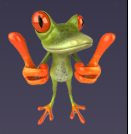

08

$$225 : 30 =$$

09

$$1240 : 5 =$$

10

$$2.6 \cdot 2 \cdot 4 \cdot 5 =$$
